## Our Environment Policy

### Responsible person: DGM, Technical

- ❖ Many types of wastage are present in raw cotton. We have modern equipment's to remove those wastage and micro dust to improve the yarn quality and escape the harmful results on worker health during the yarn manufacturing process.
- ❖ At initial stage in blow room we have duct line connected with both unifloc machines for the removal of harmful micro dust and throw it to the outside of factory through a dust bag and ensure the inside environment healthy/hygienic.
- ❖ As well as with other machines of blow room and carding many other dust lines are connected for removal of those wastage and micro dust.
- ❖ We have also the arrangement of taking fresh air every month inside the factory and exhaust the existing air in short time with the help of heavy capacity supply and exhaust fans. This air exchange process is helpful to maintain the healthy working environment.
- ❖ On the other hand, masks ear plugs are also provided to the workers, during working hours.
- ❖ In our finishing department we are also removing the micro dust by the help of exhaust fans to keep the atmosphere healthful for workers.
- ❖ We have the system of regularly check and balance the temperature and the other environmental abnormalities and to the early steps to maintain the better environment for health.
